Abstracts

Silicon carbide slurry atomization disk is a kind of atomization nozzle widely used in the thermal spray industry. It is mainly used for spraying silicon carbide coatings. The atomizer disc usually consists of a metal disc and many densely arranged small holes. When in use, silicon carbide liquid is sprayed onto the rotating surface of the disc through small holes, causing the effect of droplets flying and atomization. By purging with cooled air or inert gas, the droplets can quickly solidify and form a thin film, resulting in a uniform silicon carbide coating.

The global Silicon Carbide Slurry Atomization Disk market size was estimated at USD 85.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.35% during the forecast period.
