Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicon Electrodes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. This report studies the silicon electrodes, used for plasma etching machine. Silicon electrodes are mainly used in 8-12 inches (i.e. 200mm-300mm) plasma etching machines. In the integrated circuit manufacturing process, high-purity silicon components and wafers are made of silicon material, which makes the electrical properties of etching more uniform, so silicon component products are widely used in semiconductor etching machines. Currently the silicon electrodes are mainly produced in USA, South Korea, Japan, and China. North America is the largest producer, with a share about 60 percent. South Korea is the second producer of silicon electrodes and rings. China and Japan are the third and fourth producers. In next six years, China market will grow fastest. The major global manufacturers of silicon electrodes include Silfex Inc., Hana Materials Inc., Worldex Industry & Trading, SiFusion, CoorsTek, SK Enpulse and Mitsubishi Materials, etc. The world's top seven manufacturers accounted for approximately 85 % of the revenue. In terms of customers, OEM is dominating the market, hold a share nearly 70%. While in terms of Si parts size, the 12 inch silicon electrodes and rings are dominating market, have a share about 80%.

The global Silicon Electrodes market size was estimated at USD 918.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Silicon Electrodes market, covering all critical facets from a broad macroeconomic overview to
