## Abstracts

Silicon epitaxial susceptors are critical components used in semiconductor manufacturing processes, specifically in chemical vapor deposition (CVD) systems, where they serve as the heated platform that holds silicon wafers during epitaxial growth. These susceptors are typically made from high-purity graphite or silicon carbide coated with silicon carbide (SiC) to prevent contamination, ensure uniform temperature distribution, and withstand extreme thermal and chemical conditions. Their performance directly impacts layer uniformity, defect density, and overall yield in the production of advanced semiconductor devices, making them indispensable in the fabrication of integrated circuits, power devices, and optoelectronic components.

The global Silicon Epitaxial Susceptor market size was estimated at USD 168.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
