Report Overview

Non-Silicone release agents are ideal suited for operations where post-molding finishing is critical such as painting, bonding, or gluing. Oily transfer from standard silicone release agents will inhibit those operations from working properly causing significant scrap and downtime. Some companies choose to compensate for the silicone oil transfer by washing the part after molding with aggressive solvents. This reduced throughput, increases worker exposure, is time consuming, and expensive. Moreover silicone oils are incredible difficult to remove properly and migration into more critical production areas is always a potential issue. Silicone free release agents allow you to remove those extra cleaning steps from your process and no longer worry about silicone oils shutting down your paint shop or ancillary production areas due to silicone oil migration.
