Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicon Hydroxyl Beads competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silicanol magnetic beads are magnetic microspheres with a surface rich in silanol (Si-OH) groups. They are typically composed of a ferrite core and a silica shell. They can specifically adsorb nucleic acids (DNA or RNA) in high-salt conditions and achieve rapid separation and enrichment through an external magnetic field. These beads are widely used in molecular biology experiments such as nucleic acid extraction and purification, PCR product purification, and gene sequencing library construction. They offer advantages such as ease of operation, high recovery rates, excellent reproducibility, and amenability to automated integration. They are a key material in modern high-throughput bioassays and molecular diagnostics. In 2024, the global production of silicon hydroxy magnetic beads will reach 1,023,750 pieces, with an average selling price of US\$67 per piece.

The global Silicon Hydroxyl Beads market size was estimated at USD 68.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
