Report Overview

Silicon tetraiodide applies for the manufacturing and etching of silicon wafers used in microfabrication of electronic related components. This product has been used for the syntheses of Tetrakis(dialkylamino)silanes. SiI₄ was proposed as a potential precursor for the deposition of Si-based films by CVD. SiI₄ is advantageous, as it is a simple Si-containing precursor which can be used in thermally or UV-assisted CVD deposition processes. SiI₄ has a simple structure and does not require laborious synthetic procedures. Tetraiodosilane also provides high film growth rates and low minimum film deposition temperatures.
