Abstracts

?Silicon nitride ceramic plunger? is a plunger made of silicon nitride ceramic material with excellent physical and chemical properties. Silicon nitride ceramics have high strength, high temperature resistance (above 1200°C), corrosion resistance, low density, self-lubricating properties and excellent thermal shock resistance. They are especially suitable for high-precision, high-wear, and extreme working conditions. As the core moving component of pumps and hydraulic systems, plungers need to withstand high pressure, high-frequency friction and chemical corrosion for a long time. Traditional metal materials are prone to failure, and silicon nitride ceramics have become an ideal substitute.

The global Silicon Nitride Ceramic Plunger market size was estimated at USD 113.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.80% during the forecast period.
