## Abstracts

Silicon on insulator wafers are most common in microelectromechanical systems (MEMS) and advanced complementary metal-oxide-semiconductor (CMOS) integrated circuit fabrications. Silicon on insulator wafers improve many of the processes that more traditional silicon wafers are used in. These wafers provide a manufacturing solution which helps reduce power and heat while increasing the speed performance of a device. Silicon on insulator wafers are a three layer material stack composed of the following: an active layer of prime quality silicon (device layer), a buried oxide layer (box) of electrically insulating silicon dioxide, and a bulk silicon support wafer (handle). SOI wafers are unique products for specific end-user applications.

The global Silicon-on-Insulator Wafer market size was estimated at USD 292.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
