Abstracts

Silicon photonics packaging is a technology that integrates and packages silicon-based optoelectronic devices (such as lasers, modulators, photodetectors, etc.) with electronic components to achieve efficient conversion and transmission of optical and electrical signals. Its core is to manufacture optical components on silicon chips through semiconductor processes and combine them with traditional electronic chips to form a high-performance, low-power optoelectronic integrated system. This technology solves the bottlenecks of traditional copper interconnection in speed, energy consumption and bandwidth, and is widely used in data centers, 5G communications, artificial intelligence, high-performance computing and other fields. The silicon photonics packaging market is experiencing a period of rapid growth, benefiting from the explosive demand for high-speed, low-power optical interconnection in data centers, artificial intelligence, and 5G communications. North America and the Asia-Pacific region (especially China) have become core growth poles, with companies such as Intel, TSMC, and Zhongji Xuchuan leading technology iterations and promoting large-scale commercial use of 400G/800G optical modules. However, the difficulty of heterogeneous integration and the fact that packaging costs account for more than 60% are still major challenges. The industry is seeking breakthroughs through standardization alliances (such as COBO) and wafer-level packaging process optimization. In the future, with the integration of silicon photonics with lithium niobate modulators, quantum computing and other technologies, the market will continue to expand to diversified application scenarios (autonomous driving LiDAR, consumer electronics sensing), becoming the core driving force for the upgrading of the optoelectronics industry.

The global Silicon Photonics Packaging market size was estimated at USD 155.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.50%

during the forecast period.
