Abstracts

Silicon steel, an alloy with a silicon content of 0.5% to 4.5%, is known for its high magnetic permeability, low coercivity, and high electrical resistivity. It can be classified into non-oriented and oriented silicon steel based on the grain orientation and crystal alignment. Oriented silicon steel has grains aligned in the rolling direction, offering excellent magnetic flux density in this direction, and is suitable for static devices like transformers. Non-oriented silicon steel has grains oriented in various directions, providing good magnetic flux density in all directions, and is suitable for rotating devices such as industrial motors, new energy vehicle drive motors, and various home appliance motors. Non-oriented silicon steel is mainly used in new energy vehicles, small and medium-sized motors, home appliances, electric bicycles, large generators, and intelligent manufacturing fields. In the new energy vehicle sector, non-oriented silicon steel, as the core material for the stator and rotor cores of permanent magnet synchronous motors, fully benefits from the explosive growth in new energy vehicle production and sales.

The global Silicon Steel for New Energy Vehicle market size was estimated at USD 3588.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
