The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicon Strontium Inoculant competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Silicon strontium inoculant is an alloy material used in the casting industry, mainly composed of silicon and strontium. As a highly efficient inoculant, it can improve the quality of castings, especially reducing shrinkage cavities and porosity defects. Its main function is to promote graphitization and reduce the number of eutectic clusters when the supercooling is large. The upstream of the industry chain mainly includes mineral resources such as silica and strontium ore, as well as key raw materials such as ferrosilicon and metallic strontium obtained through smelting and processing. Downstream applications are primarily in the casting industry, especially in sectors with high-quality casting requirements. Global sales in 2024 were approximately 80,000 tons, with an average market price of approximately US\$1,400 per ton. The scale of single-line production capacity varies depending on production processes and investment scale. Industry gross profit margins range from 20% to 35%.

The global Silicon Strontium Inoculant market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.60% during the forecast period.
