Abstracts

A silicon wafer boat is a specialized equipment used in semiconductor manufacturing and solar cell production, mainly used to carry and process silicon wafers or silicon materials. In the semiconductor manufacturing process, a silicon wafer boat is often used in high-temperature processing processes, such as annealing or diffusion processes, to help heat or cool silicon wafers evenly. It is usually made of high-purity silicon material because it has good heat resistance, chemical stability and corrosion resistance at high temperatures. The silicon wafer boat is designed to provide stable support to ensure that the silicon wafers are not contaminated and remain precisely positioned during the manufacturing process.

The global Silicon Wafer Boat market size was estimated at USD 211.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
