Abstracts

Silicon wafer polishing liquid is suitable for rough/medium polishing of semiconductor materials such as silicon wafers. And the surface quality after polishing is stable, effectively reducing the cost of polishing liquid. This report studies the CMP slurry for semiconductor silicon wafer. As the base material of integrated circuits, silicon wafers have the characteristics of controllable resistivity and oxygen-carbon content. The single crystal ingot undergoes slicing, lapping, polishing, cleaning and other processes to obtain a silicon wafer with a specific thickness & geometric parameters and a clean surface. The top five companies in the world's silicon polishing slurry are mainly Fujimi, Fujifilm, DuPont, Merck (Versum Materials) and Anjimirco Shanghai. The silicon polishing slurry market is highly concentrated, with the market share of the top 5 companies exceeding 83%. The production areas are mainly distributed in Japan and the United States. The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.

The global Silicon Wafer Slurry market size was estimated at USD 156.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
