### Report Overview

Silicone as a fabric coating offers a lot of promise. It is less expensive than PTFE although still more expensive than PVC. Like PTFE, it is flame and UV-resistant and has a long life span. Furthermore, silicone blocks out the short wave UV-B and UV-C part of the ultraviolet spectrum, the rays that are responsible for causing damage to the fibers and harm to humans and plants, while transmitting UV-A light which is essential for plant growth. Being a type of rubber, silicone is very flexible, and when coated on fiberglass, can reduce damage from folding. Silicone when burned (at high temperature, given its high heat resistance) leaves merely an ash of silica dioxide.
