## Abstracts

Silicone finishing agents are specialized chemical formulations, typically based on polydimethylsiloxane (PDMS) or modified silicone polymers, that are applied to textiles and other materials to impart specific functional properties such as softness, smoothness, water repellency, abrasion resistance, and enhanced durability. These agents work by forming a flexible, hydrophobic film on the surface of fibers, modifying their tactile and performance characteristics without significantly altering the underlying material structure. They are widely used across the textile industry in processes like padding, exhaust, or spraying to improve the hand feel, appearance, and functionality of fabrics ranging from apparel and home textiles to technical and industrial textiles.

The global Silicone Finishing Agent market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
