## Abstracts

?Silicone Foam Border Dressings are advanced wound care products designed to manage exudate while protecting the wound and surrounding skin. They consist of a soft silicone adhesive layer that gently adheres to the skin without sticking to the moist wound bed, minimizing pain and trauma during dressing changes. The absorbent foam core effectively manages exudate, maintaining a moist environment conducive to healing, while the outer film layer acts as a barrier against external contaminants, including bacteria and viruses. These dressings are suitable for various wound types, including pressure ulcers, diabetic ulcers, arterial and venous ulcers, traumatic wounds, and surgical incisions. Their gentle adherence makes them particularly beneficial for patients with fragile or sensitive skin, as they reduce the risk of maceration and skin stripping upon removal.

The global Silicone Foam Border Dressing market size was estimated at USD 4766.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
