Abstracts

Silicone foam dressings are advanced wound care products composed of a soft, absorbent polyurethane foam layer combined with a gentle silicone adhesive border, designed to manage moderate to heavily exuding wounds while minimizing trauma to the surrounding skin and fragile wound bed during dressing changes. These dressings create a moist healing environment, provide effective exudate management, and reduce the risk of maceration, making them suitable for a variety of wounds including pressure ulcers, diabetic foot ulcers, surgical wounds, and traumatic injuries. The silicone layer adheres securely without sticking to the skin or wound, enhancing patient comfort and allowing for painless removal, which is particularly beneficial for patients with sensitive skin or those requiring frequent dressing changes.

The global Silicone Foam Dressings market size was estimated at USD 350.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
