Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Silicone Intraocular Lens competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A Silicone Intraocular Lens (IOL) is a medical implant made of biocompatible silicone material, designed to replace the natural lens of the eye after cataract extraction or other lens-related surgeries. Characterized by its flexibility and elasticity, the silicone IOL can be folded or rolled for minimally invasive implantation through a small incision, reducing surgical trauma and promoting faster healing. Its hydrophobic or hydrophilic surface properties minimize protein adsorption and posterior capsule opacification (PCO), while the optical design ensures clear vision correction. Widely used in ophthalmology, this lens type is suitable for patients seeking stable refractive outcomes and long-term biocompatibility, especially in cases requiring secondary implantation or complex surgical conditions.

The global Silicone Intraocular Lens market size was estimated at USD 1080.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.10% during the forecast period.
