Abstracts

?Silicone Lite Foam Dressings are advanced wound care products designed for managing non to low exuding wounds. They consist of a thin, soft, and discreet hydrophilic foam pad that maintains a moist environment conducive to healing. The dressing features a gentle silicone adhesive layer that securely adheres to the skin without causing trauma upon removal, minimizing pain and reducing the risk of epidermal stripping. The breathable backing film allows moisture vapor transmission while acting as a barrier against water and bacteria, protecting the wound from external contaminants. These dressings are highly flexible, conforming to various anatomical contours, and can be repositioned during application or lifted during wear time for observation, enhancing patient comfort and mobility.
