Abstracts

Silicone mould release agent is a sacrificial release agent commonly used for core release of metal molds in the precision sand casting industry. Silicone mold release agents contain a special lubricant that provides optimum release and finish on any metal or plastic mold. Silicone mold release coatings are applied to a variety of substrates to form cross-linked, non-stick surfaces that can be used to protect pressure-sensitive adhesives until use, as well as many other tacky materials. Anti-stick coatings are based on silicone chemicals and are commonly applied to plastic and paper substances. They act as release agents, allowing the adhesive to be released from the mold prematurely. Silicones are widely used in coatings due to their improved adhesion as well as their resistance to abrasion, moisture and slip. In industrial processes, release coatings are used on paper, self-adhesive labels and labels. Growing demand and application of release coatings in various industries such as food & bakery, hygiene, and labeling are expected to be key drivers for market growth. Emergence of digital label printing technology and demand for water-based coatings are also contributing to growth opportunities in the target market. The medical industry has a growing demand for silicone and non-silicone release coatings. Moreover, growing demand for silicone release coatings in different applications such as hygiene products, tapes, and labels is creating lucrative opportunities for market players. End users of release coatings are looking to customize these products to their requirements. Furthermore, the development and production of PDMS (polydimethylsiloxane) based release coatings is expected to provide good growth opportunities for industry players.

The global Silicone Mould Release Agents market size was estimated at USD 884.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
