Abstracts

Silicone release film has superior release effect and good economy, but it may not be suitable for some delicate industrial processes that need to avoid silicone contamination. In addition, silicone oil may cause troubles in some subsequent processes (such as printing), such as ink is difficult to adhere. Non-silicone release film avoids the problem of silicone contamination, so it performs well in coating and high temperature environments. It is one of the preferred materials in high-end applications. In addition, non-silicone release agents may have better compatibility in some processes, reducing interference with subsequent processes.

The global Silicone and Non-silicone Release Films market size was estimated at USD 7635.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
