Abstracts

Silicone oil emulsifiers are specialized chemical agents designed to facilitate the formation and stabilization of emulsions containing silicone oils, which are otherwise inherently hydrophobic and immiscible with water-based systems; these emulsifiers function by reducing interfacial tension at the oil-water boundary, enabling the creation of uniform, stable dispersions such as water-in-silicone or silicone-in-water emulsions, depending on the hydrophilic-lipophilic balance (HLB) of the emulsifier used. They typically consist of silicone-based surfactants, often modified with polyether or alkyl groups to achieve the desired compatibility and emulsion stability, and are critical in applications requiring the integration of silicone's beneficial properties?such as lubricity, heat resistance, and water repellency?into aqueous formulations.

The global Silicone Oil Emulsifier market size was estimated at USD 315.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
