## Abstracts

Silicone refers to a compound whose molecular structure contains Si-C bonds and at least one organic group is directly connected to a silicon atom. The basic raw materials for the production of organic silicon mainly include metal silicon, methanol and hydrogen chloride. Starting from silicone monomers and their intermediates, through various reactions, or adding various fillers and additives, they are further processed into various end products such as silicone oil, silicone rubber, and silicone resin. The main manufacturers of Silicone Recycling are ECO USA, GW United Chemicals GmbH and TerraCycle, etc. The top five manufacturers account for about 80% of the share. Asia-Pacific is the largest market with about 55% share, followed by North America and Europe with more than 20% and 15% share. Physical Crushing is the largest segment with about 80% share. Industrial Waste Recycling is the largest application with a share of about 67%.
