Abstracts

Silicone surface additives are specialized chemical compounds, primarily polydimethylsiloxane-based, designed to modify the surface properties of coatings, inks, plastics, and other materials by reducing surface tension, improving substrate wetting, minimizing defects like craters or orange peel, enhancing scratch resistance, and providing slip or anti-blocking characteristics. These additives function by migrating to the interface between the applied material and air or the substrate, creating a uniform, controlled surface that optimizes both aesthetic qualities and functional performance in industrial and consumer applications.

The global Silicone Surface Additives market size was estimated at USD 1020.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
