Abstracts

Silicone surface lubricants can help prevent surface sticking. Lubricants are critical to ensuring the proper functioning of machines and equipment used in the food and beverage industry. Because lubricants are used in the food and beverage industry, they may accidentally come into contact with processors' food and beverages. Therefore, they should be non-toxic and not affect the taste or smell of these products. Food-grade silicone lubricants are used in machine parts and other equipment such as plastic gears, conveyor belts, pulleys, rubber washers, and chain plastic bushings. Moreover, the demand for food grade silicone lubricants is high as they work well at high temperatures and do not wash off, heat transfer fluids are highly regulated in the food and beverage industry due to public health and environmental protection factors, thereby driving market growth. In recent years, rapid industrialization and Industry 4.0 have driven the rapid development of the electrical and electronic industry. The electronics industry is divided into power utilities and general hardware. Furthermore, the increase in the adoption of electric vehicles will affect the silicone lubricants market, as the automotive industry is one of the major end-use industries for silicone lubricants. When making silicone lubricants for electric vehicles, consideration must be given to how well they will work and the magnitude of the electrical currents and electromagnetic fields in electrical modules, sensors and circuits. In the electrical and electronics industry, silicone lubricants are used in a variety of ways, such as the protection of battery terminals, the potting of small electronic components, and the lubrication of threads to prevent sticking and corrosion. Many lubricant manufacturers, such as Shin-Etsu Chemical Co., Ltd. (Japan), 3M (US), and Dow Chemical (US), have launched new silicone lubricants compatible with electric vehicles. Hence, the growth of the EV market will increase the demand for silicone lubricants.

The global Silicone Surface Lubricants market size was estimated at USD 2399.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
