Abstracts

Silicone transformer oil, also known as silicone insulating fluid, is a synthetic dielectric liquid composed primarily of polydimethylsiloxane (PDMS) polymers, specifically engineered to serve as a cooling and insulating medium in high-voltage electrical transformers and other power distribution equipment due to its high thermal stability, excellent dielectric strength, low viscosity, and inherent fire-resistant properties, making it a safer and more environmentally stable alternative to traditional mineral-based or synthetic ester oils, particularly in applications where fire safety, extended service life, and reduced maintenance are critical considerations, such as in densely populated urban areas, indoor substations, or harsh environmental conditions where biodegradability and toxicity concerns are minimized.

The global Silicone Transformer Oil market size was estimated at USD 540.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
