Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Siliconized Coating Bottle competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Siliconized coating bottles are high-performance packaging containers with a layer of organic silicon material (such as polydimethylsiloxane, PDMS) coated on the inner surface of glass or plastic bottles. They are mainly used in pharmaceuticals, biological preparations and other fields that have high requirements for packaging materials. Through siliconization treatment, a uniform hydrophobic film is formed on the inner surface of the bottle, which can effectively reduce the adsorption, reaction or degradation between the drug and the container, and improve the stability and safety of the drug.

The global Siliconized Coating Bottle market size was estimated at USD 2388.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
