Report Overview

Screen printed silicone is a type of silicone that is printed through screen printing. The main components of screen printed silicone are silica and polysiloxane. Silk screen silicone can be divided into manual printing and machine printing. If manual printing is used, it requires multiple printing cycles to form. However, the printing process is too slow and the production capacity is not high. As it is manually scraped, some patterns may have some ghosting if not paid attention to. Silk screen printing can only print one color at a time. If color matching is required, first print the first color, then dry it, adjust the position of the screen, and then print the second color. And machine printing only needs one molding. Silk screen silicone has the characteristics of environmental protection, non delamination of printing color, multiple printing effects, good adhesion, delicate touch, excellent performance, non-toxic and harmless. After silk screen printing, the three-dimensional effect of the product will be enhanced and become more beautiful. Mainly because silk screen silicone is non-toxic and harmless, there is no need to worry about safety issues.
