Abstracts

Silver activated charcoal dressing is an innovative wound care material that combines activated carbon with silver ions. It has both the powerful adsorption capacity of activated carbon and the natural antibacterial properties of silver ions. This type of dressing is characterized by its efficient adsorption performance and sustained antibacterial effect, which can effectively reduce the risk of wound infection during the care process and promote wound healing. The advantage of silver-containing activated carbon dressing is that it can not only quickly absorb harmful substances on the wound surface, but also continuously release silver ions to fight against a variety of pathogenic microorganisms, providing a clean and dry healing environment for the wound, thereby accelerating the recovery process and reducing the patient's pain and economic burden.

The global Silver Activated Charcoal Dressing market size was estimated at USD 584.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.60% during the forecast period.
