Abstracts

Bonding wire, as the core inner lead material in the packaging process, is an indispensable basic component in the manufacturing process of integrated circuits and discrete semiconductor devices. It specifically refers to the fine metal wire used to electrically connect the bonding points of the internal circuit of the chip with the internal contact points of the lead frame through wire bonding technology during the assembly of semiconductor devices and integrated circuits. Silver alloy bonding wire is a new type of alloy bonding wire, including gold-plated silver alloy wire and gold-silver-palladium alloy wire. Bonding wires include bonding gold wires, silver wires, copper wires, and aluminum wires. Silver alloy bonding wires belong to a small category, among which different silver alloy contents have different applications. For example, gold-plated silver wires are mainly used for LED packaging; while gold-silver-palladium alloy bonding wires are mainly used for IC packaging and power devices. At present, silver alloy bonding wire (wire) companies are mainly distributed in the United States, Japan, mainland China, and Taiwan, China. The leading companies mainly include TANAKA Precious Metals, Heraeus, Nippon Micrometal Corporation, TATSUTA, Precision Packaging Materials, LT Metal, MK Electron, Yantai Zhaojin Kanfort Precious Metals Co., Ltd, Ningbo Kangqiang Electronics, etc., and the competition landscape is diversified. However, the market is still mainly occupied by international leading companies, and the domestic market in China is also the case. However, with the development of China's semiconductor market, it has brought more opportunities to Chinese local companies. In the future, with the continuous improvement of the technical strength of Chinese bonding wire manufacturers and the acceleration of market expansion, the market share of Chinese manufacturers is expected to be further improved.

The global Silver Alloy Bonding Wires market size was estimated at USD 548.0 million

in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
