Abstracts

Silver Glass Ionomer Cement (GIC) is a dental restorative material composed of a glass powder containing calcium-alumino-silicate and a liquid consisting of an aqueous solution of polyacrylic acid and tartaric acid, which chemically bonds to both enamel and dentin through an acid-base reaction when mixed, releasing fluoride ions over time to help prevent secondary caries and offering advantages such as biocompatibility, thermal expansion similar to tooth structure, and adhesion without requiring extensive tooth preparation, though it is generally less wear-resistant and aesthetically inferior to resin-based composites.

The global Silver Glass Ionomer Cement market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
