Report Overview

Brazing is the joining two or more metals by filling a molten filler metal, or a brazing alloy. The melting point of these alloys is usually above 840°F and below the melting temperature of the base metals that are to be joined. Brazing is usually performed in controlled atmospheric conditions (in a vacuum furnace). Flux is used to prevent the oxidation of metals during brazing. Silver- and gold-based alloys are used for many brazing procedures.
