Abstracts

Silver Sintering Die-Attach Materials is a kind of high silver-filled die attach paste, which can achieve ultra-high thermal conductivity. Silver sintered pastes offer a robust lead-free alternative to solder pastes increasing the lifetime of the device up to 10 times. It can be applied to printing or dispensing processes, which can ensure higher thermal conductivity in lead frame and LED packaging applications. Silver Sintering Die-Attach Materials is mainly nano silver pastes, which is designed for die-attach bonding, especially for power semiconductors like SiC (Silicon Carbide) and GaN (Gallium Nitride). Nano silver pastes are gaining popularity as die-attach materials due to their ability to bond at low temperatures and their suitability for applications requiring high operating temperatures, where traditional solder materials may not be ideal. Heraeus Electronics, Kyocera, Indium, Alpha Assembly Solutions, Namics, Henkel, Nihon Handa, Bando Chemical Industries, Advanced Joining Technology and NBE Tech are the key manufactures in the global Silver Sintering Die-Attach Materials market. Among them, Heraeus Electronics is the largest manufacturer, its revenue share of global market exceeds 32.56% in 2023. The market concentration is high, top five players accounted for about 82% of the world's revenue share. Manufacturers of silver sintered chip bonding materials are mainly concentrated in Japan and China. As China's influence in the global electronics manufacturing industry continues to grow, Chinese companies are also actively developing and promoting silver sintered materials, especially in high-growth areas such as electric vehicles and 5G communication equipment. Chinese manufacturers are gradually narrowing the technological gap with Japan. Companies in other countries (such as Germany and the United States) are also developing technology in this field, but their market share is relatively small.

The global Silver Sintering Die-Attach Materials market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.20% during the forecast period.
