## Abstracts

The simulated moving bed chromatography system is an efficient continuous separation and purification technology. It achieves countercurrent operation similar to a real moving bed by periodically switching the flow path. It is widely used in the pharmaceutical, food, fine chemical and other industries. It divides the chromatographic column into multiple areas and uses fluid dynamics to optimize the separation process. Compared with traditional batch chromatography, SMB has the advantages of high purity, high yield and low solvent consumption. It is particularly suitable for large-scale industrial production such as chiral drug separation and sugar extraction. With the development of AI optimization, green solvents and continuous manufacturing, SMB technology is evolving towards a more efficient and environmentally friendly direction.

The global Simulated Moving Bed Chromatography System market size was estimated at USD 581.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
