Report Overview:

Simulation software or also referred to as virtual testing helps to identify and resolve flaws in the new product before its launch. The simulation software is used by manufacturers to create a virtual representation of a theoretical system and mimic its real-world aspects. Simulation tests can be conducted under different circumstances, which are extremely challenging to replicate in real life. Hence, the data collected from these tests is managed through simulation and test data management software. Furthermore, simulation and test data management software can effectively manage and process information, which offers faster time-to-market.

The Global Simulation and Test Data Management Market Size was estimated at USD 748.99 million in 2023 and is projected to reach USD 1576.00 million by 2029, exhibiting a CAGR of 13.20% during the forecast period.
