Report Overview:

This report studies the SLAM Robots market, Simultaneous localization and mapping, or SLAM for short, is the process of creating a map using a robot or unmanned vehicle that navigates that environment while using the map it generates. SLAM is technique behind robot mapping or robotic cartography. The robot or vehicle plots a course in an area, but at the same time, it also has to figure out where its own self is located in the place. The process of SLAM uses a complex array of computations, algorithms and sensory inputs to navigate around a previously unknown environment or to revise a map of a previously known environment. SLAM enables the remote creation of GIS data in situations where the environment is too dangerous or small for humans to map.

The Global Simultaneous Localization and Mapping (SLAM) Robots Market Size was estimated at USD 351.58 million in 2023 and is projected to reach USD 427.20 million by 2029, exhibiting a CAGR of 3.30% during the forecast period.
