## Abstracts

Simultaneous thermal analyzer (STA) is a thermal analysis technique that combines thermogravimetry (TGA) and differential scanning calorimetry (DSC) in a single instrument for simultaneous measurement of the weight change and heat flow of a sample over a temperature range. STA can provide comprehensive thermal information about the sample, such as decomposition, oxidation, dehydration, heat resistance, evaporation, glass transition, melting, crystallization, specific heat capacity, chemical reactions, and enthalpy changes. The future market trends of STA are driven by the growth of e-commerce, the increasing demand for faster and cheaper delivery, the adoption of advanced technologies, and the globalization of trade. Some of the key trends are: The rise of omnichannel fulfillment, which integrates online and offline channels to provide a seamless shopping experience for customers. STA can help online merchants optimize their fulfillment processes and enhance their product quality and safety by analyzing the thermal properties and stability of their products. The expansion of fulfillment networks, which involves having multiple fulfillment centers across different regions and countries to reduce shipping costs and time, and to meet local regulations and customer preferences. STA can help online merchants monitor and control the thermal conditions and performance of their products during storage and transportation, and prevent thermal damage or degradation. The automation and digitalization of fulfillment operations, which use technologies such as robotics, artificial intelligence, machine learning, cloud computing, and blockchain to optimize fulfillment processes and enhance efficiency, accuracy, and productivity. STA can help online merchants leverage the data and insights from thermal analysis to improve their decision making and quality management, and to enable real-time visibility and traceability of their products. The emergence of new fulfillment models, such as micro-fulfillment, on-demand fulfillment, and crowd-sourced fulfillment, which offer more flexibility, scalability, and convenience for online merchants and customers. STA can

help online merchants adapt to the changing customer demands and preferences, and to customize their products according to the specific thermal requirements and conditions of each order.

The global Simultaneous Thermal Analyzer (STA) market size was estimated at USD 598.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
