Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-acting Spring Return Actuator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of single-acting spring-return actuators reached 630,000 units, with an average selling price of \$950 per unit. Single-acting spring-return actuators are industrial control devices that utilize pneumatic or hydraulic power to drive the actuator, with an internal spring providing automatic reset. They are widely used in valve automation control systems and play a key role in the petrochemical, energy, metallurgy, water treatment, and pharmaceutical industries. Upstream raw materials include carbon steel, stainless steel, alloy springs, seals, and piston assemblies. Major suppliers include SANDVIK, Nippon Steel, SKF, and Freudenberg. Downstream customers include control valve and automation system manufacturers such as Emerson, Rotork, SAMSON, Festo, and CNNC Su Valve. Global production capacity is approximately 750,000 units per year, with mainstream manufacturers producing approximately 5,000 units per line. The industry's gross profit margin remains between 27% and 33%. Downstream consumption of these actuators is approximately 600,000 units annually, primarily for medium- and high-pressure pneumatic valve control. Future development directions will focus on lightweight design, modular structure and explosion-proof products to meet the automation needs of smart factories and energy equipment.

The global Single-acting Spring Return Actuator market size was estimated at USD 599.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
