Abstracts

The single-acting vane pump is a kind of impeller pump. When the rotor rotates one circle, the oil pump sucks and discharges oil once for each working volume. Its working principle is to suck the liquid from one end through the rotation of the impeller, and after being compressed inside the pump body, it is discharged from the other end. The single-acting vane pump has the characteristics of stable flow, small pressure fluctuation and low noise, and is widely used in hydraulic systems, lubrication systems and other fields.

The global Single Acting Vane Pump market size was estimated at USD 1224.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
