A single-axis positioner is a precision motion control device designed to provide highly accurate linear or rotary positioning along one axis, typically employing servo motors, stepper motors, or piezoelectric actuators integrated with feedback systems such as encoders or linear scales to ensure repeatable and reliable movement. These systems are engineered to achieve sub-micron to nanometer-level precision and are configurable for applications requiring controlled acceleration, velocity, and positional accuracy, often interfacing with higher-level control systems via industrial communication protocols. Common configurations include motorized linear stages, rotary stages, and goniometers, which are fundamental components in automation, manufacturing, semiconductor processing, biomedical instrumentation, and optical systems where exact, reproducible motion is critical.
