Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-axis Pneumatic Drilling Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The single-axis pneumatic drilling machine uses compressed air as power, converts air pressure energy into mechanical energy through a pneumatic motor or cylinder to drive the drill to rotate or impact. Compared with electric or hydraulic drive, the pneumatic system has the characteristics of no risk of electric sparks and strong environmental adaptability (suitable for humid and dusty environments). The single-axis pneumatic drilling machine controls the speed, feed speed and impact force of the drill bit through air pressure to achieve drilling processing of materials such as metal, plastic, and wood. Its processing accuracy and efficiency are affected by air pressure stability, drill bit material, and workpiece material.

The global Single-axis Pneumatic Drilling Machine market size was estimated at USD 862.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.70% during the forecast period.
