## Abstracts

Single B cell antibody service is a specialized scientific offering that focuses on isolating and exploiting individual B cells from the immune system to generate monoclonal antibodies. It involves advanced techniques to identify and capture antigen-specific B cells directly from various biological samples, such as blood, lymph nodes, or spleen tissues. These captured B cells are then cultured, their antibody-encoding genes are cloned and expressed in appropriate expression systems, enabling the production of highly specific and homogeneous monoclonal antibodies. This service is crucial for a wide range of applications in biomedical research, diagnostics, and therapeutics.

The global Single B Cell Antibody Service market size was estimated at USD 436.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
