Report Overview

Single Board Computers (SBCs) are compact, fully functional computing systems that integrate all core components—such as the processor, memory, storage, and I/O interfaces—onto a single printed circuit board (PCB). These devices are designed for embedded computing, industrial automation, education, and hobbyist projects, offering a balance of performance, energy efficiency, and cost-effectiveness. Unlike traditional desktop or laptop computers, SBCs often prioritize modularity and customization, supporting a wide range of operating systems, including Linux, Android, and real-time OS variants. Key players in the market include Raspberry Pi, Arduino, BeagleBoard, and NVIDIA's Jetson series, each catering to different use cases, from simple programming and prototyping to AI-driven applications and edge computing. The growing demand for IoT devices, robotics, and smart systems has significantly expanded the SBC market, with industries leveraging their scalability and low power consumption for cost-efficient solutions. Additionally, the rise of open-source hardware and software ecosystems has further accelerated adoption, making SBCs a versatile tool for developers, educators, and enterprises alike.
