Abstracts

Single Chamber Vacuum Heat Treatment Furnace is used for a wide variety of heat treating processes and applications, such like hardening, tempering, annealing, brazing, low pressure carburizing and sintering. Vacuum heat treatment furnace is an advanced heat treatment equipment that has been greatly developed in recent years. The workpiece is heated and cooled in an ultra-low pressure space. It has the advantages of good quality, energy saving, safety and less pollution. Vacuum heat treatment is a comprehensive technology that combines vacuum technology and heat treatment. It means that all and part of the heat treatment process is carried out in a vacuum state. Vacuum is divided into low, medium, high and ultra-high vacuum. The equipment is mainly composed of furnace shell, heating chamber, air-cooling circulation system, vacuum system, water-cooling system, pneumatic system, inflation and deflation system, temperature measurement system, electric control system and material truck. The workpiece to be processed is heated slowly in the furnace, the internal heat temperature difference is small, and the thermal stress is small, so the deformation is small and the product qualification rate is high. It can reduce the cost and has the function of degassing, thus improving the mechanical performance and service life of the work. The working environment is good, the operation is safe, and there is no pollution and public nuisance. The processed workpiece has no danger of hydrogen embrittlement, and the hydrogen embrittlement on the surface of titanium and refractory metal shells is prevented. The stability and repeatability of the vacuum heat treatment process are good. With this series of advantages, the development of vacuum heat treatment equipment and processes has been paid more and more attention and applied more and more widely.

The global Single Chamber Vacuum Heat Treatment Furnace market size was

estimated at USD 273.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
