Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single-Channel Microwave Therapy Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Single-Channel Microwave Therapy Device production reached approximately 9072 units, with an average global market price of around K US\$ 9.6 per unit. A Single-Channel Microwave Therapy Device is a medical physical therapy equipment utilizing a single microwave output channel. It generates specific frequency microwave energy through a magnetron, transmitted via coaxial cable to a treatment probe, causing water molecules and ions in human tissues to produce thermal effects under alternating electric field, thereby achieving therapeutic goals of promoting blood circulation and reducing inflammation and pain. The device consists of a microwave generator, power control system, treatment radiator, and safety monitoring module, typically operating at 2450MHz±50MHz with continuously adjustable output power ranging from 10-150W. Featuring simple operation, controllable treatment depth, and uniform thermal field distribution, it is suitable for rehabilitation and physical therapy departments in medical institutions at all levels. The gross profit margin of the single channel microwave therapy device industry is about 35% -45%, with an annual production of 500-800 units per production line. The cost of raw materials (magnetron, control system, chassis structure, cable components) accounts for about 50% -55%, R&D and production costs (circuit design, process development) account for 20% -25%, quality certification and testing account for 10% -15%, and sales and after-sales service account for 10% -15%. Magnetron, as the core component, accounts for 30% -40% of the cost of raw materials. Global medical institutions consume approximately 150000 to 200000 single channel microwave therapy devices annually, with primary healthcare institutions accounting for over 60% of procurement, and private clinics experiencing

significant growth in demand. The annual demand for upstream electronic components exceeds 5 million pieces, and the market size of microwave components is about 800-1.2 billion US dollars. Downstream, driven by the increasing demand for primary healthcare construction and rehabilitation, it is expected that the demand for equipment updates will maintain a high growth rate in the next three years.

The global Single-Channel Microwave Therapy Device market size was estimated at USD 87.1 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
