Abstracts

Single-chip DLP laser projectors are projection devices that utilize single-chip Digital Light Processing (DLP) technology combined with a laser light source. These projectors achieve rapid switching and efficient blending of red, green, and blue light through a single DLP chip, delivering high resolution and fine image quality. The laser light source enhances the device with features such as high brightness, extended lifespan, and low maintenance costs. Compared to multi-chip DLP systems, single-chip DLP laser projectors have a more compact design and lower cost, making them ideal for education, business presentations, small-scale theaters, and other applications requiring high image quality within a limited budget.

The global Single-chip DLP Laser Projector market size was estimated at USD 1896.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
