### Report Overview

Single Chip On-Board Units (OBUs) are compact, integrated electronic devices used in intelligent transportation systems (ITS) and electronic toll collection (ETC) to enable vehicle-to-infrastructure (V2I) communication. These chips combine processing, communication, and data storage functionalities into a single module, supporting standards like DSRC (Dedicated Short-Range Communications) or C-V2X (Cellular Vehicle-to-Everything). They facilitate real-time data exchange for applications such as tolling, traffic management, and safety alerts while being energy-efficient and cost-effective due to their streamlined design. The market is driven by increasing demand for smart mobility solutions, government mandates for ETC adoption, and advancements in connected vehicle technologies. However, challenges include interoperability issues between regional standards and cybersecurity concerns. Key players include semiconductor firms and ITS solution providers, with growth opportunities in emerging markets and next-gen 5G-enabled OBUs.
