Abstracts

Single color mid power LEDs are semiconductor light sources operating in the 0.2 to 1.0 watt range, typically producing light within a specific narrow wavelength band such as red, green, blue, amber, or white, and are designed for surface-mount technology (SMT) applications where a balance of efficiency, thermal performance, and cost is required. These devices are characterized by their moderate luminous flux output, reliability under continuous operation, and compatibility with automated assembly processes, making them distinct from both low-power indicator LEDs and high-power illumination LEDs. They are commonly used in backlighting modules for consumer electronics, automotive interior lighting, signage, general decorative lighting, and status indicators where consistent color output and energy efficiency are prioritized over extreme brightness.

The global Single Color Mid Power Leds market size was estimated at USD 6500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
