Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Single Core Power Cable competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.A Single Core Power Cable is an electrical cable consisting of a single conductor, typically made of copper or aluminum, insulated with a durable material such as PVC, XLPE (cross-linked polyethylene), or EPR (ethylene propylene rubber). It is designed to carry electrical power in various voltage ranges, including low, medium, and high voltage systems. The single conductor structure makes it ideal for applications requiring high current capacity, especially where electromagnetic interference (EMI) and ease of installation are important considerations. These cables are often used in power distribution networks, industrial plants, renewable energy systems (such as solar and wind farms), substations, underground installations, and heavy-duty electrical equipment. Depending on the installation environment and mechanical protection needs, single core power cables may come with additional features such as metallic armoring, moisture barriers, or flame-retardant jackets.

The global Single Core Power Cable market size was estimated at USD 9604.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Single Core Power Cable market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
