Report Overview

Single Crystal Angle Beam Transducers is mainly composed of skew block, piezoelectric wafer, sound absorbing material, shell, socket, etc. The ultrasonic wave is transmitted/received by piezoelectric wafer. When the incidence Angle (?) is between the first critical Angle and the second critical Angle, only S-wave exists in the workpiece according to the law of ultrasonic refraction at the interface of different acoustic impedance. The sound absorbing material is used to absorb the noise emanating from the back of the wafer and around the inclined block. The shell plays the role of support, protection, electromagnetic shielding, etc. The socket is an electrical interface connected to the instrument through the probe wire. The Angle of refraction of the inclined probe is indicated by the K value.
